

## ELECTRIC STANDARD PRACTICE

No. 113.1

Page 1 of 21

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018
SECTION <b>GENERAL PRACTICES</b>		
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>		
<p style="text-align: center;">Yellow highlight indicates change since last publication</p> <p><b>1.0 PURPOSE</b></p> <p>1.1 Southern California presents both a dangerous natural wildland fuel scenario and explosive fire weather potential year round. The peak period for active fire conditions are normally in the fall but can exist all year long depending on annual precipitation and other dynamic weather factors. SDG&amp;E facilities, equipment, and activities can present a potential wildland fire ignition risk which must be minimized to the extent reasonably possible. In the event a fire occurs, we must also be equipped to suppress small fires, thus potentially preventing a major fire. Most importantly, we must provide the resources and training necessary to keep our employees safe while working in the wildland areas. This plan is for all system Operations &amp; Maintenance work and can be used for low complexity Construction projects when additional mitigation is not required (see 4.8 SDG&amp;E PROJECT SPECIFIC FIRE PREVENTION PLANS). The intent of this document is to formalize procedures and routine practices that will:</p> <p>1.1.1 Assist SDG&amp;E employees, <b>contractors and consultants</b> in their understanding of fire prevention and to improve their ability to prevent the start of any fire. The emphasis will be on wildland fires, especially during the critical times of the year when the fire risk is high.</p> <p>1.1.2 Set standards for fire tools and equipment to be present in vehicles and at work sites. This will assist with rapid response to small fires in the event one should occur.</p> <p>1.1.3 Incorporate State, Federal, and local requirements into our standard way of doing business to provide compliance with rules and regulations on a daily basis, no matter where work is taking place. This would include, but not be limited to: pertinent laws, Forest Standard Practice Regulations, and "Special Use Permit" or "Right of Way" fire related requirements.</p> <p>1.1.4 Provide a fire risk and mitigation matrix based on work activity and Fire Potential Index (FPI) to set a level for minimum fire prevention and suppression tools.</p> <p>1.1.5 Define or reference restrictions mandated by "Red Flag Warnings," "Project Activity Levels," or other unique fire danger scenarios. Provide the means for determining when these restrictions are in effect, what activities they prohibit, the precise locations to which they apply; and identify the notification procedures for all affected employees, contractors and <b>consultants</b>. (<a href="#">See TMC-1320</a>) and/or <b>Section 4.3 Fire Risk &amp; Mitigation Matrix in this document.</b></p> <p>1.1.6 Ensure that our employees and contractors have positive communication for reporting fires and initiating assistance. <b>Dialing 911 is the primary means for reporting emergencies.</b></p> <p>1.1.7 Discuss procedure to identify when a Construction project specific "Fire Plan" is required and the process for developing the document.</p> <p>1.1.8 Share some common sense practices, with regards to fire safety, that should be used in all activities to reduce the risk of fires and to prevent injury to employees as a result of fire.</p> <p><b>2.0 APPLICABILITY</b></p> <p>2.1 This Standard Practice applies to all SDG&amp;E personnel who work in the wildland areas of the service territory. Included are all Distribution, Transmission, Substation, Contracted personnel and Consultants whose activities are described herein.</p>		
ISSUED BY <b>RANDY LYLE</b>	APPROVED BY <b>BRIAN D'AGOSTINO</b>	

## ELECTRIC STANDARD PRACTICE

No. 113.1

Page 2 of 21

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018
SECTION <b>GENERAL PRACTICES</b>		
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>		
<p style="text-align: center;">Yellow highlight indicates change since last publication</p> <p><b>3.0 DEFINITIONS</b></p> <p>3.1 <b>“At Risk” Activities:</b> Activities that present a risk of igniting a wildfire.</p> <p>3.2 <b>Wildland Areas:</b> This is any area with wildland vegetation (trees, chaparral, grass, and ground litter) to support the ignition and spread of a wildland fire. This does not include parking strips, ornamental vegetation or areas that are cultivated, landscaped and irrigated.</p> <p>3.3 <b>Wildland Fuels:</b> Native vegetation such as grasses, brush and trees that are not cultivated, planted as landscaping and irrigated.</p> <p>3.4 <b>HFTD – CPUC’s High Fire Threat District:</b></p> <ul style="list-style-type: none"> <li><b>Tier 2</b> – This region consists of areas on the CPUC Fire-Threat Map where there is an elevated risk (including likelihood and potential impacts on people and property) from wildfires associated with overhead utility power lines or overhead utility power-line facilities also supporting communication facilities.</li> <li><b>Tier 3</b> – This region consists of areas on the CPUC Fire-Threat Map where there is an extreme risk (including likelihood and potential impacts on people and property) from wildfires associated with overhead utility power lines or overhead utility power-line facilities also supporting communication facilities. Tier 3 is distinguished from Tier 2 by having the highest likelihood of utility-associated fire initiation and growth that would impact people or property, and where the most restrictive utility regulations are necessary to reduce utility fire risk.</li> <li><b>Zone 1</b> – This region consists of Tier 1 High Hazard Zones (“HHZs”) on the map of Tree Mortality HHZs prepared jointly by the United States Forest Service and the California Department of Forestry and Fire Protection (“CAL FIRE”). <b>Note: for SDG&amp;E, Zone 1 is encompassed within Tier 2 and Tier 3.</b></li> </ul> <p>3.5 <b>Fire Season:</b> Fire season is no longer officially designated by the wildland fire agencies. California is considered to be in fire season on a yearlong basis. CAL FIRE adjusts its staffing patterns as fire conditions moderate or escalate and this can be used as an indicator of potential fire activity.</p> <p>3.6 <b>Fire Potential Index (FPI) (1-17):</b> This is a comprehensive assessment of fire risk, used as a tool for making operation &amp; maintenance decisions related to fire prevention. The tool converts environmental, statistical, and scientific data into an easily understood forecast of short-term fire threat. The index is generated for a seven-day forecast period for an assortment of geographic areas within the service territory. The 7-day forecast is used for planning purposes, while the daily FPI is used for work activities. The FPI is used to determine the fire potential range for each day (Normal, Elevated, or Extreme), definitions of each to follow.</p> <p>3.6.1 <b>Normal Fire Potential (1-11):</b> It is considered “Normal” when the FPI is green. All O&amp;M activities can take place in the wildland areas of the service territory without additional risk mitigation, as long as baseline fire equipment is available as prescribed in this plan. Note: the baseline fire equipment requirements meet or exceed all local, state, &amp; federal requirements for working in the wildland areas.</p> <p>3.6.2 <b>Elevated Fire Potential (12-14):</b> It is considered “Elevated” when the FPI is either yellow or orange. Certain “at risk” O&amp;M activities may require additional mitigation measures in order to proceed with the work. Refer to Section 4.3 Fire Risk and Mitigation Matrix.</p>		
ISSUED BY <b>RANDY LYLE</b>	APPROVED BY <b>BRIAN D’AGOSTINO</b>	

## ELECTRIC STANDARD PRACTICE

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018
SECTION <b>GENERAL PRACTICES</b>		
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>		
<p style="text-align: center;"><b>Yellow highlight indicates change since last publication</b></p> <p>3.6.3 <b>Extreme Fire Potential (15-17):</b> It is considered "Extreme" when the FPI is red. No "at risk" activities should be conducted except for those activities which, if left undone, present a greater risk than that involved with their accomplishment. Consultation with the On-duty Fire Coordinator is required to help make that determination and identify additional mitigation required to reduce risk.</p> <p>3.7 <b>Red Flag Warning (RFW):</b> The National Weather Service will declare a RFW when conditions are expected to meet either of the following criteria:</p> <p>3.7.1 Relative humidity is 15% or less with sustained winds equal to or greater than 25 mph, or frequent gusts equal to or greater than 35 mph for a period of 6 hours or more. This RFW (based on wind/relative humidity) will be considered "Extreme" operating condition regardless of the FPI for that time period and have the same restrictions described for "Extreme."</p> <p>3.7.2 Dry lightning is for a lightning event that is not accompanied by enough precipitation to significantly wet fuels that have been identified as critically dry. This is common within the inland and mountain zones. This RFW (based only on dry lightning) will be assessed by Meteorology and Fire Coordination to determine the appropriate operating condition related to actual weather conditions, and Grid and Dist. Ops. will notify field personnel.</p> <p>3.8 <b>Project Activity Level (PAL):</b> This term is specific to the Cleveland National Forest (CNF) and only applies to work within the boundaries of the CNF. When conducting work on the CNF it is each crew member's responsibility to know the PAL level and adhere to any additional work restrictions or mitigation measures listed in SDG&amp;E Operations &amp; Maintenance Fire Prevention Plan for the Cleveland National Forest.</p> <p>3.9 <b>Fire Tools:</b></p> <p>3.9.1 <b>Shovel:</b> standard round point shovel with overall length of at least 46".</p> <p>3.9.2 <b>Pulaski:</b> an axe-like fire hand tool used for cutting, chopping or grubbing.</p> <p>3.9.3 <b>McLeod:</b> a fire hand tool used for raking and scraping.</p> <p>3.9.4 <b>Backpack pump:</b> is a portable 5-gallon water pack with hose and nozzle used for extinguishing Class A (common combustibles) fires and primarily wildland fires. They can be collapsible backpacks, plastic (poly) tanks or steel tanks.</p> <p>3.9.5 <b>Fire box:</b> can be placed in a staging area or worksite to supplement available fire suppression equipment when necessary due to excessive work activity. It generally contains additional hand tools and/or backpack pumps as deemed appropriate.</p> <p>3.10 <b>Major Operations Work Area (MOW):</b> It will be considered a major operations work area when work activities or staging of resources will be concentrated in and out of a staging facility. These work sites are typically large in size and include but are not limited to construction yards, fly yards, substation pads and any other area where construction work will be concentrated.</p>		
ISSUED BY <b>RANDY LYLE</b>	APPROVED BY <b>BRIAN D'AGOSTINO</b>	

## ELECTRIC STANDARD PRACTICE

No. 113.1

Page 4 of 21

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018
SECTION <b>GENERAL PRACTICES</b>		
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>		
<p style="text-align: center;"><b>Yellow highlight indicates change since last publication</b></p> <p><b>3.11 Fire Patrol:</b></p> <p>3.11.1 A <i>designated</i> "Fire Patrol" is a member of a work crew assigned the responsibility and accountability for fire prevention, risk mitigation, early detection of fires, and rapid extinguishment should one occur. This can be accomplished co-laterally with other work duties and should be documented on the tailboard form or similar document. If a person is working alone they will be considered the designated "Fire Patrol" for their activity and no documentation is required.</p> <p>3.11.2 A <i>Dedicated</i> "Fire Patrol" is a person(s) assigned the responsibility and accountability for fire prevention, risk mitigation, early detection of fires, and rapid extinguishment should one occur. This will be their sole duty while serving as a dedicated Fire Patrol. <b>Effective May 1, 2019:</b> when a Dedicated Fire Patrol is required the position must be filled with a SDG&amp;E Contracted Qualified Fire Fighter (QFF).</p> <p>3.13 <b>SDG&amp;E Contracted Qualified Firefighter (QFF)</b> - a contracted QFF is an individual that has successfully completed certain wildland firefighter classes required by SDG&amp;E that are deemed necessary to perform fire prevention duties when at risk work requires a Dedicated "Fire Patrol". See Attachment #5 for list of training required.</p> <p>3.14 <b>SDG&amp;E Fire Coordinator (FC):</b> The SDG&amp;E Fire Coordinator serves as a conduit or liaison to the emergency service agencies for the utilities for everyday operations as well as emergency incidents. The FC will help the emergency service agencies obtain their needs related to the utility and represent the utility needs to the emergency service agencies.</p> <p>3.15 <b>SDG&amp;E Utility Commander:</b> SDG&amp;E will follow Incident Command System protocols on all emergency incidents. SDG&amp;E will positively identify a single point of contact for all SDG&amp;E resources (people and equipment) on any emergency incident. The appropriate line authority will identify who the SDG&amp;E Utility Commander will be on moderate or complex incidents. "First- in" supervisor will generally be the Utility Commander on low complexity incidents. The Utility Commander will coordinate SDG&amp;E activities with the overall Incident Commander, usually a jurisdictional fire chief.</p> <p>3.16 <b>Operations &amp; Maintenance (O&amp;M):</b> O&amp;M refers to post construction care and maintenance of SDG&amp;E facilities.</p> <p>3.17 <b>SDG&amp;E Point of Contact (POC):</b> The SDG&amp;E POC serves as the Company Point of Contact and will be the "go-between for incident communications." There will always be an SDG&amp;E POC during an active incident and there can only be one for the incident. All SDG&amp;E (and contracted) personnel will know who the SDG&amp;E POC is at all times.</p> <p>3.15 <b>Off Road Travel:</b> Vehicle travel or vehicle placement where there is no established road or where vehicle is travelling on an unimproved road bed (washed out, not graded, vegetation growing in the roadbed (two-track)).</p>		
ISSUED BY <b>RANDY LYLE</b>	APPROVED BY <b>BRIAN D'AGOSTINO</b>	

**ELECTRIC STANDARD PRACTICE**

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018
SECTION <b>GENERAL PRACTICES</b>		
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>		
<p style="text-align: center;"><b>Yellow highlight indicates change since last publication</b></p> <p><b>4.0 PROCEDURE</b></p> <p>4.1 <b>General:</b> SDG&amp;E personnel will be committed to the following three step process for reducing the fire risk and exposure involved with potential wildland fires related to our work activities or equipment;</p> <p>4.1.1 Fire Prevention: all work activities taking place in the wildland areas of our service territory will be assessed with regard to fire risk during standard safety tailboard sessions. Those activities that pose risk and can be excluded will be. Those that cannot be eliminated will incorporate appropriate mitigation measures to reduce the risk where possible, and in those cases where all risk cannot be eliminated the following steps will be in place.</p> <p>4.1.2 Immediate or Early Fire Detection: SDG&amp;E enhances the ability of its crews to detect fire at its earliest stages by assigning designated (co-lateral duty) and dedicated Fire Patrols (sole duty) as well as training all personnel to establish good situational awareness during "Normal," "Elevated," and "Extreme" operating conditions.</p> <p>4.1.3 Rapid Extinguishment: prescribed fire tools and equipment will be available within 50' of worksite and immediately available for rapid extinguishment of any ignition.</p> <p>4.2 <b>Tools &amp; Equipment:</b> When working in the HFTD (identified on Attachment 1); the following tools and equipment are required as a minimum and will be carried on the vehicles as described. If work is in a wildland area outside the HFTD, it is recommended you use these same standards. This does not apply to traffic driving through wildland areas and remaining on paved roads. These items will meet the California Forest Practice Rules; Public Resource Code Division 4, Chapter 6. Making this equipment available at your work sites will also meet the majority of the requirements mandated by the wildland fire agencies within the company service territory.</p> <p>Some additional project specific or weather specific requirements may be necessary and will be discussed in the following section of this plan. <b>Please note that if your work project is over 50' from the vehicle location, the mandated equipment should be removed from the vehicle and staged at the work site.</b></p> <p>4.2.1 Passenger Vehicles (operating/parking in the wildland areas):</p> <p>4.2.1.1 1 round point shovel with overall length of at least 46"</p> <p>4.2.1.1.1 On the rare occasion that a full-size shovel cannot be safely carried inside smaller vehicles consult with Fire Coordination for a variance.</p> <p>4.2.1.2 1 serviceable fire extinguisher, minimum U.L. rated "2A10BC;" rating found on fire extinguisher label (a "2" rated extinguisher will put out approx. 2 sq. ft. of combustible material and BC indicates it will work on flammable liquids and is non-conductive for electrical fires)</p> <p>4.2.2 Trucks &amp; 4 Wheel Drive Vehicles:</p> <p>4.2.2.1 1 round point shovel with overall length of at least 46"</p> <p>4.2.2.2 1 Pulaski</p> <p>4.2.2.3 1 (5) gallon backpack pump</p>		
ISSUED BY <b>RANDY LYLE</b>	APPROVED BY <b>BRIAN D'AGOSTINO</b>	

## ELECTRIC STANDARD PRACTICE

No. 113.1

Page 6 of 21

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018						
SECTION <b>GENERAL PRACTICES</b>								
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>								
<p style="text-align: center;"><b>Yellow highlight indicates change since last publication</b></p> <p>4.2.3 Heavy Machinery or Equipment (including tub grinders, whole tree chippers, drilling rigs, tractors, etc.):</p> <p>4.2.3.1 1 round point shovel with overall length of at least 46"</p> <p>4.2.3.2 1 Pulaski</p> <p>4.2.3.3 1 (5) gallon backpack pump</p> <p>4.2.4 Chain Saw Use:</p> <p>4.2.4.1 1 round point shovel with overall length of at least 46" within 25 feet of the chainsaw operation with unrestricted access to the tool <b>or</b> 1 serviceable UL rated <b>2A10BC</b> fire extinguisher in their immediate possession.</p> <p>4.2.5 Major Operations Work Area (When vehicle equipment does not meet the needs of the work area a Fire Box or equivalent should be located on site and be accessible to all personnel and there should be enough total tools to outfit number of personnel on scene):</p> <p>4.2.5.1 1 (5) gallon backpack pump</p> <p>4.2.5.2 2 Pulaskis</p> <p>4.2.5.3 2 McLeod fire tools</p> <p>4.2.5.4 Round point shovels with overall length of at least 46" (enough to outfit remaining personnel)</p> <p>4.3 <b>Fire Risk &amp; Mitigation Matrix:</b> The following matrix is designed to blend the fire risk associated with a specific work activity with the fire potential index for the day to establish the proper fire prevention measures required in each scenario. Most of the work activities can be done daily simply by having the required equipment from section 4.2 available, serviceable, and proximate to work site. Some activities involve more risk and may require additional mitigation measures. The fire potential is determined by the daily Fire Potential Index. Green on the FPI is considered <b>Normal Fire Potential</b>. Under <b>Normal</b> the baseline tool &amp; equipment requirements from section 4.2 suffice, except for specifically noted exceptions. <b>Elevated Fire Potential</b> is when the FPI is in the yellow/orange range and certain work activities may require additional mitigation measures in order to proceed with the work; again, refer to matrix. <i>The supervisor responsible for the work activity will document how the additional mitigation will be met for the day's activities. This can be done in conjunction with normal tailboard documentation or as separate documentation.</i></p> <p><b>Extreme Fire Potential</b> is the red on the FPI and most work activities will cease, except where not performing the work creates a greater risk than doing so. In those cases where work will be done, consult with On-duty Fire Coordinator ((858) 503-5152) and check matrix to see if additional mitigation is required. The supervisor responsible for the work activities will document that work has in fact ceased or why it was acceptable to continue. If Fire Coordination is consulted they too will document when a joint decision to continue work is made.</p> <table border="1" style="margin: 20px auto; text-align: center;"> <thead> <tr> <th>Normal</th> <th>Elevated</th> <th>Extreme</th> </tr> </thead> <tbody> <tr> <td style="background-color: #90EE90;"><b>&lt; 12</b></td> <td style="background-color: #FFD700;"><b>12-14</b></td> <td style="background-color: #FF0000;"><b>15-17</b></td> </tr> </tbody> </table> <p style="text-align: center;"><b>Daily Fire Potential Index can be found at <a href="https://fpi.sdgeweather.com/">https://fpi.sdgeweather.com/</a>.</b></p>			Normal	Elevated	Extreme	<b>&lt; 12</b>	<b>12-14</b>	<b>15-17</b>

<b>FIRE RISK &amp; MITIGATION MATRIX</b>				
<p>The work activity described can be performed to the <b>Fire Risk</b> level indicated unless specifically noted that it cannot, or by meeting the minimum additional mitigation requirements indicated for that level. This assumes the baseline tool requirements from section 4.2 are available, serviceable, and proximate to work site. <i>Note; a "designated" Fire Patrol can have co-lateral duties, whereas a "Dedicated" Fire Patrol is committed to fire prevention duties and responsibilities.</i> The criterion for EXTREME is to do only the work where not performing the work creates a greater risk than doing so. Consult Fire Coordination for special mitigation requirements.</p>				
Work Activity	Work Activity Description	<b>NORMAL Fire Risk</b>	<b>ELEVATED Fire Risk</b>	<b>EXTREME or RFW Fire Risk</b>
<i>Vehicle, Roads, Inspections</i>		<b>1-11</b>	<b>12-14</b>	<b>15-17</b>
Vehicle travel	On paved roads or improved roads with no vegetation on			
Vehicle travel	Off road vehicle travel and un-maintained roadbeds		Must designate a Fire Patrol (Document)	Permitted only for work that meets the extreme criteria and must have a <b>Dedicated Fire Patrol</b>
Inspections/ Surveying	Ground, aerial, security, climbing, vegetation, and weed control inspections, etc.			Must follow vehicle travel rules above.
Access Road Maintenance	Vegetation removal, water bars, culvert cleaning/repair, grading		Must designate a Fire Patrol (Document) and 150 gal. of water and equipment for its use	Not Permitted
<i>Substations within the HFTD</i>		<b>NORMAL</b>	<b>ELEVATED</b>	<b>EXTREME</b>
At Risk Activities ≤ 10 feet from inside station fence	Any substation activities		Standard Tools within 50 +refer to specific work activities in matrix	No Work
Activities inside the substation and > 10 feet from inside station fence	Any substation activities	No tools required	No tools required	No tools required

**ELECTRIC STANDARD PRACTICE**

No. 113.1

Page 11 of 21

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018
SECTION <b>GENERAL PRACTICES</b>		
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>		
<p style="text-align: center;"><b>Yellow highlight indicates change since last publication</b></p> <p>4.3.1 Optional considerations for particularly hazardous or high risk areas where additional mitigation measures are warranted (<i>discuss with On-duty Fire Coordinator</i>):</p> <p>4.3.1.1 Small fire engine or patrol unit with minimum 150 gallons of water</p> <p>4.3.1.2 Cache of fire hose and related accessories</p> <p>4.3.1.3 Water supply; water tender, truck, or hydrant (1500 gal. recommended)</p> <p>4.3.1.4 Dozer or tractor, capable of producing fire line</p> <p>4.3.2 Helicopter Operations: Helicopter staging areas will be treated similar to other staging areas with enough fire equipment for personnel on site or fire box available on major operations. On Temporary Structure Access Pads (TSAP), adequate firefighting equipment shall be carried on the helicopter for the number of personnel working on the ground at those sites.</p> <p>4.4 General Fire Prevention Considerations:</p> <p>4.4.1 It is required on projects in the SDG&amp;E HFTD (and recommended in any wildland area) to conduct a formal "tailboard" safety session to discuss fire risks. All fire concerns will be documented, including designated or dedicated fire patrol, mitigation measures taken, and extinguishment plans for any at risk work for the day.</p> <p>4.4.2 Smoke only in designated smoking areas or in a 10' clearing void of all grass or other vegetation. Cigarette butts or other smoking materials are not to be discarded on the ground and must be disposed of in an appropriate receptacle.</p> <p>4.4.3 Idling your vehicle in areas of brush, grass, or other vegetation is prohibited. When parking in these areas; shut off vehicle and check vehicle undercarriage for any threat of fire ignition.</p> <p>4.4.4 When driving over grass meadows or areas of low vegetation, have a designated Fire Patrol follow along with fire tools available to extinguish an inadvertent fire start. If traveling alone, you become the designated fire patrol, frequent observations of the ground behind you should be made with fire tools ready and available and this should not be done in elevated or extreme conditions.</p> <p>4.4.5 At work sites have all required tools available and within 50' of the work activity. Tools should be serviceable and ready for use.</p> <p>4.4.6 When using any piece of equipment capable of producing sparks and/or which has an exposed exhaust system, provide an area with 10' clearance or equivalent from the heat source and at a minimum assign and document a designated Fire Patrol during elevated and extreme conditions.</p> <p>4.4.7 All internal combustion engines shall have approved spark arresters.</p> <p>4.4.7.1 Engines used to provide motive power for trucks, tractors, buses, and passenger vehicles, except motorcycles, are exempt if the exhaust system is equipped with a muffler.</p> <p>4.4.7.2 Turbocharged engines are exempt.</p> <p>4.4.8 When it is possible, wet down adjacent vegetation when performing at risk work in the wildland areas.</p> <p>4.4.9 Consider work hour restrictions in the wildland areas avoiding particularly hazardous work during the hottest portions of the day.</p>

## ELECTRIC STANDARD PRACTICE

No. 113.1

Page 12 of 21

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018
SECTION <b>GENERAL PRACTICES</b>		
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>		
<p style="text-align: center;"><b>Yellow highlight indicates change since last publication</b></p> <p><b>4.5 General Fire Safety Considerations:</b> As previously indicated, fire prevention is the primary focus of all of our efforts. We do carry the proper equipment to rapidly extinguish a witnessed ignition or very small fire that is within our capabilities to take action on. If at any time the fire becomes unmanageable or unsafe for you to continue your suppression actions, you should stop and retreat to a safe area. If work activities require personnel to perform utility related work adjacent to or near an uncontrolled wildfire the following considerations become important for your safety (See below).</p> <p><b>4.5.1</b> Use proper Personal Protective Equipment (P.P.E.), standard SDG&amp;E requirements apply. When working within or adjacent to uncontrolled fire perimeter company issued fire resistant clothing should be worn.</p> <p><b>4.5.2</b> When working on or adjacent to a wildland fire, positive communications must be maintained internally using SDG&amp;E work protocols. It is critical that employees have the ability to communicate with fire agencies for reporting fires and for the exchange of critical information for the duration of an incident. Cross communication with the fire agencies is the responsibility of the SDG&amp;E Utility Commander (single point of contact assigned to manage all SDG&amp;E resources), the Fire Coordinator (FC), or the On-Site Supervisor (pre-designated work supervisor for affected area) in the absence of a Fire Coordinator or SDG&amp;E Utility Commander.</p> <p><b>4.5.3</b> Know what the fire is doing at all times. Observe personally or be in direct communication with a competent person (IC, FC, or On-Site Supervisor) who is monitoring fire activity.</p> <p><b>4.5.4</b> Work within the Incident Command System (ICS) while assigned to a fire incident. Understand the chain of command for the incident and who you are accountable to. Check in and check out when entering an uncontrolled fire perimeter after it is determined to be safe by the IC, FC, or on-site SDG&amp;E Single Point of Contact.</p> <p><b>4.5.5</b> Pre-evaluate and designate safety zones (areas large enough to provide a safe retreat) and escape routes (safe access to these safety zones) when working in the wildland areas during high fire danger days.</p> <p><b>4.5.6</b> Get proper rest and adequate water during extended fire activity to avoid fatigue and help prevent accidents and/or injuries.</p> <p><b>4.5.7</b> Exercise extreme caution when driving within a fire area and/or smoky conditions. Be aware of falling rocks, trees, and other debris as well as road obstructions and other traffic. Keep driving speeds down when visibility is limited.</p>

## ELECTRIC STANDARD PRACTICE

No. 113.1

Page 13 of 21

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018
SECTION <b>GENERAL PRACTICES</b>		
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>		
<p style="text-align: center;"><b>Yellow highlight indicates change since last publication</b></p> <p><b>4.6 Red Flag Warnings/Extreme Fire Potential Index:</b> An Extreme Fire Potential Index (FPI) rating will be issued by SDG&amp;E Meteorology for the operating districts where weather and vegetation conditions indicate that the burn environment is conducive for catastrophic wildfire. Red Flag Warnings (RFW) are issued by the National Weather Service (NWS) when conditions are conducive for rapid or explosive fire growth. RFWs are issued for various NWS <b>fire</b> weather zones that transect the SDG&amp;E service territory. The NWS will declare a RFW when conditions are expected to meet either of the following criteria:</p> <p>4.6.1 Relative humidity is 15% or less with sustained winds equal to or greater than 25 mph, or frequent gusts equal to or greater than 35 mph for a period of 6 hours or more. The operating condition will be considered "Extreme" during this RFW, regardless of actual FPI rating, and all work activity will cease, except such activities that, without performing, would create a greater risk. Restrictions likely apply, see section 4.3.</p> <p>4.6.2 A lightning event in which precipitation does not significantly dampen critically dry fuels. During this event, Fire Coordination and Meteorology will confer to determine the operating condition for the duration of the RFW. Restrictions likely apply, see 4.</p> <p>4.6.3 Supervisors will retain authority to allow (exempt) work necessary to mitigate an immediate fire risk. The supervisor will be required to document the exemption. If required, the On-duty Fire Coordinator can provide assistance with the decision and documentation process. During pre-event conference calls Fire Coordination will remind affected parties of work restrictions as they relate to the particular event.</p> <p><b>4.6.4 Red Flag Warning/Extreme Fire Potential work restriction decision tree. Utilize this decision tree during a declared RFW or when the FPI is 15-17 Extreme and follow matrix in Section 4.3 of ESP 113.1.</b></p>  <pre> graph LR     A([Is work in the Fire Weather Zone where the NWS has declared a RFW or SDG&amp;E District is in "Extreme" FPI?]) -- Yes --&gt; B([Is the work Over Head?])     A -- No --&gt; D[Follow ESP 113.1 or a Project Specific Construction Fire Prevention Plan]     B -- Yes --&gt; C([Is the work in the High Fire Threat District (HFTD)?])     B -- No --&gt; D     C -- Yes --&gt; E([No work aside from that work which is left undone creates more of a hazard])     C -- No --&gt; D   </pre>

## ELECTRIC STANDARD PRACTICE

No. 113.1

Page 14 of 21

DEPARTMENT FIRE SCIENCE AND CLIMATE ADAPTATION	DIVISION FIRE SCIENCE AND FIRE COORDINATION	EFFECTIVE DATE DEC. 14, 2018
SECTION <b>GENERAL PRACTICES</b>		
SUBJECT TITLE <b>SDG&amp;E OPERATIONS AND MAINTENANCE WILDLAND FIRE PREVENTION PLAN</b>		
<p style="text-align: center;"><b>Yellow highlight indicates change since last publication</b></p> <p><b>4.7 Project Activity Levels:</b> The United States Forest Service has a program it utilizes to reduce the risk of fire on National Forest land, particularly in the timber or mountain areas. It is referred to as Project Activity Levels (<i>PALS</i>). Each day at 4:00 p.m. the PAL will be announced for the following day. It may be different for different geographical areas in the county. IT ONLY APPLIES TO THE CLEVELAND NATIONAL FOREST. This information is available by calling (619) 557-5262. The PAL index will determine what activities can be done on the forest the following day and what risk mitigation must be done to allow additional work activities. The <a href="#">CNF O&amp;M Fire Prevention plan</a> must be followed when working on USFS lands.</p> <p><b>4.8 SDG&amp;E Project Specific Fire Prevention Plans:</b> This Wildland Fire Prevention plan will be sufficient for most routine day to day work activities performed in the wildland by all SDG&amp;E employees and contractors. For projects outside of normal work activities or for an activity that seems to be especially hazardous, the Fire Coordination group should be consulted. The FC will make a determination whether this Wildland Fire Prevention plan is sufficient for the prescribed work, this plan with some minor additional mitigation will suffice, or if a project specific Fire Prevention Plan is required. If required, the FC will work with the Project Manager or representative to develop the required plan, follow it through to approval, and monitor compliance with the plan as appropriate. On major projects, there may be additional requirements assessed by the CPUC or a jurisdictional fire agency that will be incorporated as required into the project specific Fire Prevention Plan.</p> <p><b>4.9 Other Critical Fire Danger Proclamations:</b> The Fire Chiefs with jurisdictional responsibility for a given area have the authority to proclaim certain restrictions in extreme fire conditions or when they are experiencing a critical shortage of resources. These cases will be very rare and it will be incumbent on them to insure we are informed of any temporary changes in fire restrictions for their jurisdictional area. Upon notification we would be required to comply as appropriate.</p> <p><b>4.10 Fire Related Training:</b></p> <ul style="list-style-type: none"> <li>It is mandatory that all field going employees have basic wildland fire prevention training on an annual basis. If an employee who does not have wildland fire prevention training chooses to go to the field they will be escorted by someone who has had the training and has the required tools for both employees. Wildland Fire Prevention training (SFUGN103) will be incorporated into annual Compliance Training and documented using this process. The training can be accomplished in one hour at a routine safety meeting just prior to fire season or schedule sessions specifically for this purpose.</li> <li>Contractors will be responsible for providing basic wildland fire prevention training on an annual basis for their personnel who will be working in the wildland areas of the SDG&amp;E service territory. This training will need to meet requirements provided by SDG&amp;E Fire Coordination.</li> <li>For those employees who are likely to be asked to work within or immediately adjacent to an uncontrolled fire area, the following additional training is recommended: Fire Safety, Incident Command System, and basic fire behavior training.</li> </ul>
